

THE PRIVATE AI COMPANION THAT RUNS 100% ON-DEVICE

linkedin.com/in/maayan-sides

Everyone built an AI that agrees with everything. We built one that cares about the truth.

Verum is a thinking journal and personal companion for exploring meaning and thought patterns (logotherapy + CBT-informed reflection). It runs entirely on the phone's neural processor — no cloud, no servers, zero outbound bytes. What users write at night is still only theirs in the morning.

initial commercial launch

WHY NOW

The problem. Cloud LLM companions are sycophantic by training and leak the most private data people produce. The category has been burned by mental-data scandals, and 2026 regulation (EU AI Act; Illinois, Nevada, Utah laws; FDA scrutiny) is shutting down generic cloud "AI therapist" apps.

The solution. A wellness-classified, on-device companion with provable privacy: works in airplane mode, open-source client, reproducible builds, opt-in aggregate-only telemetry. Trained against sycophancy and measured by a clinical-grade evaluation system before anything ships.

MOATS

Clinical-grade Hebrew eval system

238 scenarios with clinical rubrics; survives every base-model swap. No competitor has it.

Unique safety data

Distress detection in Hebrew incl. slang and indirect phrasing. Academic publication + barrier to entry.

Trust as the product

Zero-cloud architecture, open source, reproducible builds — a differentiator that cannot be copied in a press release.

Physician founder, live clinical track

Co-PI partnership with a senior psychiatrist; ward feasibility pilot under a Helsinki ethics committee.

BUSINESS MODEL

Track A · Commercial (fast). Consumer wellness: one-time purchase + optional subscription for model updates. Zero cloud inference cost — margins grow with every user. Israel first, iOS first.

Track B · Clinical (compounding). Academic pilots under ethics committees build an evidence file toward the European reimbursement market (DiGA) without touching the commercial classification.

TEAM & CONTACT

Maayan Sides, MD — physician founder. Leads product, the clinical-grade Hebrew evaluation system and the regulatory track. Senior psychiatrist as Co-PI on the clinical research track.

The investor package includes the strategy document, architecture spec, evaluation report, and a live demo on a real device — a full conversation in airplane mode.
